

Biodigital Library

The Viitai Biodigital Library (BDL) solution is an enterprise literature lifecycle and digital knowledge management system. It is built specifically for life science companies and is unique in the fact that it aggregates and combines all of your organizational literature needs in one single application.

The BDL solution features the following:

- Covers research, nonclinical, clinical, regulatory, business development, medical affairs, medical writing, program and product management, etc.;
- Quick literature search and acquisition of full text articles in minutes; no hassle of checkout; no duplicate orders;
- Creation and sharing of user-defined libraries for research collaboration or writing groups;
- Version management, regulatory submission-ready format, automatic metadata population;
- Classification of digital knowledge by development programs filterable by keywords/tags;
- Restricted access for the business development team to confidential programs;
- Sharing of literature with site personnel or other external HCPs compliant to copyright and the Sunshine Act;
- Use of standard or custom citation styles for your organization in writing; Easy access to experiment/TLF tables, figures, and other images for writings and presentations;
- Management of other types of digital knowledge, including book/chapter, poster, image, video, proceeding, presentation, acronym, etc.;
- Central management of companywide subscriptions and links to important digital resources.

With a small investment, your organization will work on one single platform for all your literature needs. The BDL solution saves money and amplifies sharing and collaboration. Contact us today for more details and information.
