

# Biostatistical Programming Studio

The Viitai Biostatistical Programming Studio (BPS) is an innovative statistical computing environment (SCE) application that allows biostatistical teams to get their job done efficiently from a single and easy to use interface. BPS is fully compliant with regulatory requirements.

Conveniently deployed in a client's SAS server or hosted as SaaS application in the cloud, BPS standardizes the data structure and provides central management of data and other resources. The solution also provides management status overview on milestone progress and team resource assignment in real time. The TLF review web portal makes output review by project teams a breeze.

## KEY FEATURES INCLUDE:

- Consistent & standard milestone folder structure
- Auto generation of draft SAS programs from templates with pre-populated headers
- One-stop validation
- Simple archiving
- Team Resource management & status reporting
- Automation, workflow, and In-app Instant Messaging
- Filling the compliance gap and making it 21 CFR Part 11 compliant
- Easy permission management without IT involvement
- Easy to start/end unblinding
- Versioning and audit trail
- Issue tracking and resolution log
- Streamlined TLF review workflow

**On average, our clients report the following gains  
by using the Viitai BPS solution:**

3-Month Return on Investment

20% more efficiency gains

Higher user satisfaction
