

# Nonclinical Study Tracker

The Viitai Nonclinical Study Tracker (NCST) solution revolutionizes how nonclinical information and pertinent actions are managed. Excel spreadsheets, paper and antiquated archaic tools for managing nonclinical studies are still very much a part of preclinical practitioners' workplace creating inefficiencies, inconsistencies and duplication of efforts. These practices also expose organizations to unnecessary risks associated with regulatory non-compliance.

Viitai's NCST solution addresses these challenges. A state-of-the-art cloud application, secure, very user-friendly and a one-stop-shop for managing everything related to nonclinical studies, it provides many valuable features:

- Track main studies and sub-studies, GLP and Non-GLP, in-house or with a CRO;
- Built-in study numbering scheme;
- Study planning and status management;
- Control and track study progress and spending;
- Easy study information tracking and retrieval;
- Built-in content management functions for all study documentation types such as protocols, data, presentations and reports;
- Fully compliant with FDA Master Schedule and 21 CFR Part 11 regulations;
- Subscription- based and available out-of-the-box with minimal setup required;
- Accessible anywhere, anytime.

## BENEFITS

**Utilizing the Viitai NCST solution, clients can realize the following benefits:**

- Consolidation of multiple tools into one single solution for all preclinical needs. Depending on the number of tools used, significant savings are realized in tool reduction, maintenance and more.
- Elimination of "swivel-chair" scenarios where users must access multiple separate systems or spreadsheets to gain a full picture of the study.
- Clearer and more accurate real-time view of preclinical studies status through real-time reports and analytics.
- FDA and EU regulatory compliance - a significant reduction in compliance risk exposure.
